Section-1
The Rise of Evilness

In an underground secret lab
“But Professor, why are you taking out this anger on all humans?”
“Because all human society is responsible for my condition.”
“But…” Interrupted.
“Drink this serum - no more questions!”
“Fine”
“This is my revenge. Humanity will pay for what it did to me!” Professor Tylor laughed with his visible evilness.

On the other side, in an typical city of India, Indore there lived a boy – Minku.
Minku’s mom shouted, “Minku, You are getting late for school today”. She said, “Get Ready Soon”. Minku pleaded, “Mom, I really don't feel like going to school today”.
She used her ultimate weapon, “What if Pav-Bhaji is Cooked today in school?”
“Not again! you always say that. Fine, I’ll go..!”

Minku was a 12 year old boy Studying in class 7th. Like other children, Minku also had his gang, in fact he was the most clever boy in his group so he was the leader. Their group’s name was – The Gang of Giants. This gang was one of the most popular and powerful gang among other gangs of their locality.

Previous year, on the day of Holi, they won in the Great Children’s Holi League. Which was against their biggest rivals such as ‘Superior Gang’, ‘Everest Gang’ and many more. Although it was not so that Giants Gang was good in all. For instance, Everest Gang was best in

adventurous activities. Superior Gang had great knowledge in popular sports like cricket and football. Giants Gang was good in Mental and Muscular activities.
Now Kite Competition was approaching for which all nearby groups were preparing and for saving bird-lives, all have together decided not to use strong Strings. It was appreciable that children all alone took this decision.

Here in the laboratory.
“This is the moment of truth. By pressing this button, the gas will spread through the missiles in the whole world, in each corner, due to which all humans will become tiny… Hahahaha !!”, said professor Tyler.

Section-2
What Happened To All?

Next day here, don't know how Minku got up early in the morning, he usually wakes up late but he noticed something unusual. Everything around him seemed enormous. At first, he thought he was dreaming, but a quick pinch confirm it wasn't. He was so confused that he started looking for his mom but was unable to find her. "Maybe Mom too have came under the blanket due to shrinkage" Thought Minku.

Today even 10 cm seemed to be equal to 1 meter to him but finally he found her mom and waked her. Mom could not understand anything in the beginning but after some time, she also felt that why the things around are looking big...

The next 10 minutes were filled with every bad feeling for them but they consoled each other and gave confidence to except the reality. When they met other neighbors who shrinked too. News reporters and team Somehow managed to deal with this much big Cameras, mikes and screens to telecast this strange phenomenon. They literally have to jump on keyboards and slide through mouse.

Engineers worldwide began designing equipments to fit their new, smaller size. These efforts became a beacon of hope for humanity's survival. It is a matter of great surprise that they made airplanes and vehicles within a month, although they were less in quantity but enough for Country heads to come together and deal with this. In meantime, these giant mobile phones helped too to make this world connected.

For the Egyptians, this was a golden opportunity to explore the hidden chambers of the pyramids. Now mini humans created micro cameras and then pyramids were fully accessible. Researchers finally found that pyramids were used as secret bunkers, grave or location for treasure. Although there were water sources too inside, therefore all currencies have rusted down. Through internet, mystery of peanuts were not widespread. The newly accessible areas were soon opened to tourists, sparking global interest.

This phenomenon also had a great negative impact on economy and other prominent sectors. This was not enough that, the space department also announced that a large meteoroid somehow was about to hit the earth on its unexpected change in trajectory.

Scientists thought of launching powerful missiles to counter the problem but on the way of executing it, they realized that this action needed hand-scan authentication of head and other officials and the tragedy was, that scanners were unable to recognize the tiny hands of personals. Breaching the 13 layer security for survival continued…

Section-3
A New Quest Awaits...

Away from the chaos caused by the shrinking phenomenon, Minku and his friends were busy preparing for their annual kite competition. This year, the competition was particularly fierce, with many rival teams. Minku's team, The Giants, was leading in the competition until the final round when disaster struck: their kite got tangled in the wind. Just as it seemed like they would lose, a mysterious kite—almost identical to Minku's—floated in from the sky, tangling with their rivals' kite and giving The Giants the unexpected victory.

Confused but relieved, Minku went over to retrieve the kite. As he examined it, he found a folded note attached to the string. At first, they thought nothing of it. But then, after some careful inspection, they saw the words:

REACH THE COORDINATES TO NORMALISE

X' Y' Z" N X' Y' Z" E

It seemed like a strange puzzle, but the kids were intrigued. The idea of an adventure was too tempting to ignore. Minku quickly searched for the coordinates online and discovered that they pointed to a remote area near the mountains—an area known for its rugged terrain and inaccessible cliffs. It was a place few people had ever dared to explore. However, Minku noticed something unsettling: rival groups were also searching for the location, and there were signs that spies from these groups might be watching them.

Determined to follow the trail, Minku and his friends decided to go on this quest. They gathered supplies and set off on a trek toward the mountain, the coordinates guiding them further into the unknown.

Minku and his friends trudged through the rugged terrain, the weight of the discovery growing heavier with every step.

Minku, who had grown used to city life, was finding it hard to navigate through the dense forests and rocky passages. But their miniaturized size gave them an advantage—what once seemed like obstacles became easier to maneuver. Their smaller bodies made climbing and squeezing through tight spots easier, something they never would've been able to do before.

When they finally reached the plateau at the back of the mountain, they found themselves standing over a lifeless body—one that, despite the strange circumstances, looked unsettlingly familiar. It was the assistant to Professor Tyler, a man who had worked in the lab before the incident.

The sight of the body sent a chill through the group. The air felt colder, and their hearts raced as they stood in silence, trying to make sense of what they had just discovered. One of them stepped forward cautiously, examining the body. Upon closer inspection, they found a crumpled piece of paper in the assistant's pocket. Carefully unfolding it, they read:

If you are reading this, it means Tyler has found out about my communication with the outside world. He is dangerous and cannot be trusted. I was once his loyal assistant, but as I learned more about his plans, I began to question everything. This project of his—turning humans into 'tiny versions'—is only the beginning. Tyler has a greater agenda, and it's far worse than anything we can imagine.
I had to leave behind this message in case I was caught. The key to reversing the effects of his serum is hidden in the size-restoration missile he has developed. Find that perfect cubical stone and lift it to open the entrance to lab.

If you are able to get to the missile and launch it in time, there is still hope to reverse what has been done.

The note was a warning from the assistant, but it also contained crucial information: the coordinates to the hidden missile, and more about Tyler's dangerous plans. It seemed that the assistant had been working on the inside, trying to sabotage Tyler's project before it was too late.

After reading the note, Minku and his team were stunned. The message was clear—their only chance of stopping Professor Tyler and his catastrophic plans lay in uniting with the other rival groups. They couldn't do it alone. As they looked up from the note, they saw that the other gangs had gathered around them. It wasn't just the Giants Gang anymore who scaled the path. The children realized that now wasn't the time for rivalry. Their survival depended on their ability to work together.

Minku, taking the first step toward unity addressed "We've fought each other a lot in the past, but now, we have a much bigger fight ahead. We have to deal with this—together." The others nodded, understanding the seriousness of the situation.

As they set off toward the hidden lab, their unity was their greatest strength.

Section-4
Entering The Secret Lab

Minku and his friends followed the steps to open the gate and secretly entered the lab. Soon they reached main compartment. Minku and his friends had sneaked into the lab and were hiding behind a large machine. Tyler sat at his desk, sipping lemonade, unaware of their presence. The screens showed the meteoroid rapidly nearing Earth, and Tyler was humming to himself, clearly pleased with his plans. As Tyler left briefly to retrieve some notes, the kids examined the equipment. Minku noticed a vial labeled “Size-restoration Serum” and a note scribbled in messy handwriting:

CAUTION:

REACTS WITH COMPOUND X - CAUSES TEMPORARY PARALYSIS AND NAUSEA.

Minku’s eyes darted to Tyler’s table, where a bottle of lemonade sat next to a vial labeled “Compound X: Catalyst for Growth.” He quickly pieced it together. Tyler must have been drinking lemonade mixed with this compound.

“Guys, I’ve got a plan,” Minku whispered. “If we release this size-restoration Serum into the air while Tyler’s still affected by Compound X, it’ll knock him out long enough for us to save everyone!” The kids nodded, determined. They carefully adjusted the valves on the equipment to release the serum into the air.

When Tyler returned, Minku boldly stepped out from his hiding spot. “Hey, Professor! Are you the one who made us all tiny?”
Tyler smirked. “Oh, so the tiny brats have found me. Yes, I am. And guess what? I’m also the genius who sent that meteoroid toward Earth. You can’t stop me!”

“Think again!” Minku shouted, hitting the release switch on the serum valve. A light cloud filled the air. Tyler froze, then began to wobble.
“What’s… what’s this?!” Tyler grabbed his head. His body trembled, and he collapsed to the ground, groaning in pain.
“You see, Professor,” Minku said, stepping closer, “sometimes brains can outsmart strength. We just used your own inventions against you!”

As Tyler lay weak, the kids quickly input the launch codes for the size-restoration missiles and redirected the meteoroid. Within minutes, the world began to return to normal, and humanity was saved. Minku and friends were super happy on completing another mission.

Somewhere around the world,
“Can anybody here me..? Can someone tell me how am I supposed to come out of such a small hole..?”
From the pyramids.
